

Viewing angle: 150° - Thickness 0.41 mm - Reel height: 180 cm - Reaction to fire: class M2

Our Black-Black fabric is a totally darkening PVC projection surface. It is usually employed for the perimeter maskings of motorised screens, and it is perfect for front projections in case a very high degree of contrast is required, provided that the fabric is used with very bright projectors. Thanks to its features, it may be used with screens of any size, and this makes it a valid alternative in situations in which scenic needs do not allow for the use of a white-coloured fabric. Warning: not suitable for shielding sunlight and not to be used as a darkening curtain as heat might damage it!
