

Gain: 0.8 – Viewing angle: 150° – Thickness: 0.39 mm – Reel height: 240 cm – Reaction to fire: class M2

The High Contrast fabric is a dark grey front projection surface, created expressly to guarantee excellent contrast to darker tones. Its features guarantee an accurate rendering of colours, a very wide viewing angle and an extremely high image definition. Its excellent workability allows for it to be used both with frame and electric screens, even those with a black perimeter masking. Being a fabric with low gain, its use is advisable with particularly bright video projectors.
