

Gain: 1.2 - Viewing angle: 150° - Thickness: 0.25 mm - Reel height: 210 cm - Reaction to fire: class M1

This white PVC lenticular projection fabric with grey (darkening) backing is 0.25 mm thick. By virtue of its softness and elasticity, it is easily foldable and therefore particularly suitable for the making of rental frame screens or large eyeleted fabrics. Being a fairly thin material, it is not suitable for roll-up screens. The (darkening) grey backing allows for the fabric to be used even in the presence of backlights. The image on the front is particularly bright and of high contrast.
