

Gain: 0.7 - Viewing angle: 70° - Thickness: 0.25 mm - Reel height: 210 cm - Reaction to fire: class M1

Soft and elastic metallic PVC fabric with white backing. Because it ensures a discrete light polarization, this surface is used for stereoscopic passive 3D projections. It is available for frame screens and eyeleted fabrics. It guarantees an elevated contrast even if used for regular 2D projections. Its reduced thickness (0.25 mm) enables it to be folded easily, which makes it suitable also for rental or service use. Being a fairly thin material, it is not suitable for roll-up screens.
