

Gain: 1.0 - Viewing angle: 150° - Thickness: 0.42 mm - Reel height: 210 cm - Reaction to fire class M1

White projection surface in laminated PVC with black backing. During projection, it has the same efficiency of the White-Light fabric, with a perfect uniformity in colour and a very high image definition, offering in addition a higher level of contrast. Its 0.42 mm thickness ensures perfect flatness even to very large motorised screens, and its great workability allows for the making of invisible seams and fabrics with black perimeter masking. As a darkening surface, it is particularly advisable in situations made critical by the presence of windows or parasite backlights. Warning: not suitable for shielding sunlight and not to be used as a darkening curtain as heat might damage it!
